Long Answer

Q1. How does a polar bear survive in polar regions?

classmate

Date

Page

Ans

Polar bear are found in polar region. These regions are very cold place. They are able to survive there because they have special features to withstand cold. They have a layer of fat under their skin which keeps them warm.

Q2. What is camouflage? How does it help the animals?

Ans.

Some animals like grasshoppers, tiger, zebras etc. have special body coverings, they can merge themselves according to surroundings. This property is called camouflage. It helps to protect them from other hunting animals. Camouflage makes animals hard to spot.

Think and Answer :-
